PLUS GRAPH

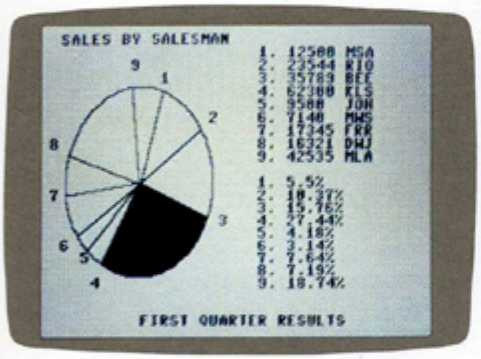
Create, Save, and Edit a variety of graphs. You can print these graphs for use in presentation of home, financial, business, or school information.

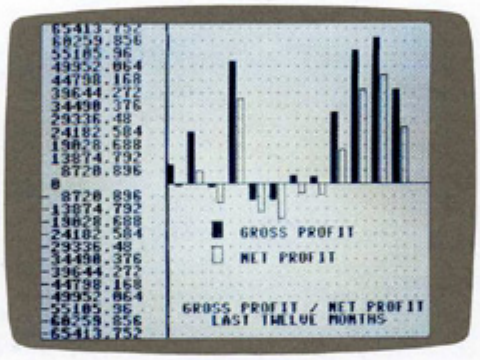


Pie Charts

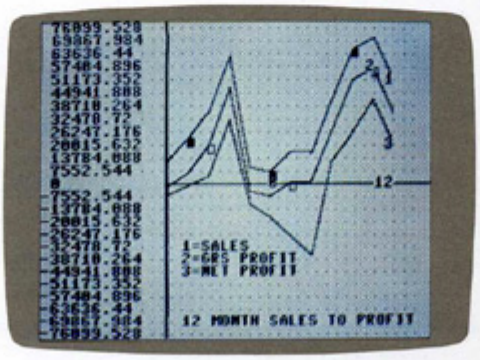
You can create a pie chart which will graph up to nine values. All graph sections are labeled and both absolute values and relative percentages are shown on the chart.

Line Graphs and Bar Graphs

Line graphs and bar graphs can display up to three variables in one chart. Both positive and negative values can be displayed. In the bar chart, each variable can have up to 12 horizontal increments. The line



graph can display up to 50 horizontal increments per variable. Symbols differentiate one variable from another for visual



reference. Scaling can be automatic or you can define your own minimum and maximum values.

Full Editing Capabilities

Text mode is incorporated with each graphic screen. You can enter text to title a graph, or to type in a full description of each variable. You can delete characters in the graph if you wish to construct a point chart or scattergram. Rotating the columns or rows allows you to see the data in varying graphic format. If you are entering values directly from the keyboard, full cursor movement is available for editing.

It's Integrated!

Because PLUS GRAPH is integrated with the Plus 4* Software—3 Plus 1—and with THE WRITE FILE and YOUR HOME OFFICE, data already prepared using the spreadsheet and data base can be used. You can then graphically display this information without having to re-type or re-format the data. These graphs can then be incorporated anywhere in a report or letter prepared with the word processor.
